

# Technical Manuscript Rewrite

**THE CHALLENGE:** To completely rewrite a section of a technical manuscript commonly used to establish industry standards. This project involved dozens of industry professionals and very little guidance from the parent organization.

**OUR SOLUTION:** Utilizing a complicated and cumbersome balloting process, including input from many experts, we spearheaded the volunteer effort to write, edit and rewrite an entire section of a technical bioprocessing manuscript for a world-renown and highly regarded engineering organization. Each comment from every individual had to be addressed and resolved in a timely and cooperative manner in order to produce a precise and valuable end product.

**THE RESULTS:** After many months of review to make sure the project was accurate and added value, the manuscript was submitted and approved. We have already begun brainstorming on how to improve upon this manuscript when the next edition is printed in two years.
